

We provide superior
performing compressed air
& gas systems with
engineered longevity to
reduce operating costs and
improve productivity.

ENGINEERED FOR SUPERIOR PERFORMANCE

Compressed Air & Gas Systems

AIRpipe specializes in solutions for compressed air and fluids distribution. Throughout the last 10 years we have continued to invest in R&D; taking into account market feedback and real-world conditions. Our products are engineered to be the most superior available - Advancing the compressed air & gas piping industry.

AIRpipe maintains a >300,000 sq ft campus for manufacturing, R&D, and logistics. We are committed to being your total system solutions provider.

Competitive Advantage

Superior Reliability & Longevity

- Highly-durable materials resistant to corrosion, vibration, thermal variation, and outdoor weather conditions.
- Metal clamshell connectors for all diameters are stronger and more durable versus polymer fittings.
- Unique grab ring design (20-50mm) and lugged ring (63-200mm) allows for zero risk of disconnection.
- Patented active concentric seals provide leak-free performance, even in high vibration applications. Seal lifespan is double that of industry competitors.

Energy & Cost Savings

- The smooth interior design and high-flow connectors ensures a constant supply of clean air at a reduced pressure drop, resulting in significant energy savings.
- Guaranteed leak-free performance and superior longevity versus traditional pipe systems.

Quick & Easy Modular Installation

- Complete range of pipe, fittings and accessories works easily for new projects renovations & extensions.
- Requires no special tooling, welding, gluing, brazing, soldering, or thread cutting.
- Reusable, lightweight, and modular design allows for easy modifications.
- Quick drops can be added at any time to create new points of use.

Connection Technology

AIRpipe innovative modular technology enables rapid and easy assembly via quick connection of fittings to the aluminum pipe. This technology takes into account the specific requirement of each diameter to provide the user with a secure connection.

Grab Ring Clamping Style Connection
DN20 - DN50mm

- Metal clamshell union connector, quick install & reassembly.
- Grab ring with surface contact, no shrinking on inner diameter.
- Surface contact, active concentric sealing, leak free.
- Superior reliability & longevity.

Lugged Ring Clamping Style Connection
DN63 - DN200mm

- Metal clamshell union connector, quick install & reassembly.
- Convex ring, no shrinking on inner diameter.
- Surface contact, active concentric sealing, leak free.
- Superior reliability & longevity.

- Closed loop system at 116 psi with 5% allowable pressure drop.

Example
<ul style="list-style-type: none"> Main system length (ring main): 500m Required flow rate: 312 SCFM Working pressure: 116 psi <p>Result: The most suitable AIRpipe diameter is: Dn50mm</p>

Warranty and Certifications

10 Year Limited Warranty:

- AIRpipe USA warrants its products to be free of defects in material and workmanship for a period of ten years from the date of product purchase. No other warranties, express or implied are made by AIRpipe USA. This limitation explicitly excludes any implied warranty of merchantability or fitness for a particular purpose. The sole remedy for breach of this warranty of material and workmanship or for negligence in manufacture or design is limited to replacement or repair, at the sole digression of AIRpipe USA. In no event shall AIRpipe USA, it's parent, and sister companies be liable for indirect, special, incidental or consequential damages of any kind. No allowance will be made for repairs made by the purchaser.

Rigid Aluminum Pipe

- Clean air certified (ISO 8573-1)
- Optimum flow performance
- Lightweight
- High quality powder coated exterior
- Extruded marine grade aluminum
- Suitable for Compressed air, oil-free or lubricated, vacuum, and inert gases (Nitrogen, Argon, Helium)
- Max.working pressure: 232 psi
Max.working pressure for DN 200 is 188 psi
- Vacuum: 3.8 inches of mercury (absolute pressure)
- Working temperature: -4 up to +176

0743	50	16	DN25
0843	50	22	DN40
0343	50	25	DN50–DN200
0443	50	38	DN100
0543	50	51	DN150–DN200

Portable Lugging Machine

AIRpipe	Applicable diameter	Remark
0844	DN63–DN200	Contains every jaw set

Installing AIRpipe

General

General

- Prior to the installation of a AIRpipe compressed air distribution system, the installer should ensure that the installation area complies with any regulations applicable to areas exposed to explosive hazards (in particular the effect of static electricity in a silo area). AIRpipe should be installed downstream of the compressed air receiver, or after the dryer. Flexible AIRpipe hose can be installed at the start of the system in order to eliminate any sources of vibration and to facilitate maintenance operations. When maintaining or modifying a AIRpipe system, the relevant section should be vented prior to the commencement of any work. Installers should use only AIRpipe components and accessories, in particular AIRpipe pipe clips and fixture clamps. The technical properties of the AIRpipe components, as described in the AIRpipe catalog, must be respected.
- AIRpipe aluminum pipe is supplied ready for use. No particular preparation (cutting, deburring, chamfering, etc.) is required.
- Thanks to the rigidity of AIRpipe aluminum pipe, temperature-related expansion / contraction is reduced to a minimum. The AIRpipe system retains its straightness, and hence its performance, over time (reduction of pressure drop caused by surface friction).
- AIRpipe aluminum pipe is calibrated and fits perfectly with all AIRpipe components.

Component assembly

- AIRpipe components are provided with assembly instructions for their correct use - simply follow the methods and recommendations stated in this document.

Expansion / contraction

- Expansion and contraction of the system should be calculated prior to installation. The system designer and installer should calculate the elongation or retraction of each AIRpipe line according to the recommendations in this installation guide.

Situations to avoid

- AIRpipe pipe should be protected from mechanical impact, particularly if exposed to collision with fork-lift trucks or when sited in an environment with moving overhead loads. Similarly, rotation of the pipe and pipe supports should be avoided. AIRpipe pipe must not be welded. Flexible AIRpipe hoses should be used in accordance with the recommendations of the installation guidelines.
 - installation within a solid mass (concrete, foam, etc.)
 - the hanging of any external equipment to AIRpipe pipe
 - the use of AIRpipe for grounding, or as a support for electrical equipment
 - exposure to chemicals that are incompatible with AIRpipe components (please contact us for further details)

Best practices to maintain an optimized AIRpipe System

- Design, installation, and maintenance should be performed in accordance with reasonable engineering knowledge and practice with involving pi ping systems
- Maintain high-quality air levels within your system.
- To avoid pressure drops within your system, minimize pipe diameter reductions
- Properly size your system to allow for optimal flow and efficiency.

Measuring Pipe Insertion Depth

- When installing pipe diameters ¾" to 2", use the insertion depth gauge (part number 0044) to place an insertion depth mark on the pipe.

Drilling indicator

- An identifying layline is imprinted on each length of pipe that may be used as an alignment guide when installing quick drop connections.

Cutting the pipe

- Rotate the corresponding pipe cutter around the pipe while gently tightening the wheel.

Nominal Diameter	Cutting slope of pipe end allowable deviation (e)
20-80	1.0
100-150	1.4
200	2.0

Use part number 0040 for pipe diameters ¾" to 2 ½".
Use part number 0140 for pipe diameters 1 ½" to 4".

Superior Reliability!

Quick and Easy Installation

Sizing Chart for Quick Drops

Pilot Bit	Hole Saw	DN(MM)	Quick Drops (PN)							
0243	0743	Φ16	2110	2210	2011					
0243	0843	Φ22	4110	4210	4011	4111				
0243	0343	Φ25	5110	5210	6110	6210	7110	7210		
			8110	8210	9110	9210	A210			
			5011	5111	6011	6111	7011	7111		
			8011	9011						
0643	0443	Φ38	8410							
0643	0543	Φ51	9410	9510	A410	A510				

Insertion Depth S For DN20~DN50 Connector

DN	Insertion depth S (IN)
20	1.14"
25	1.14"
40	1.53"
50	1.53"

- "S" denotes the insertion depth of the pipe into the connector.

Installation Guide for DN20~DN50

01 Mark the pipe with a marker pen as shown below:

→

02 Insert the marked pipe into the connector :

04 A portion of the marked lines should remain visible after the pipe is inserted into the connector.

←

03 Bring the second pipe to the connector and slide up to the marked insertion depth

05 Torque the pre-fitted screws
Max. Torque: 8Nm.

→

06 Tighten the screws in an "X" pattern.
To disassemble, perform the same operation in reverse order.

Deburr & Chamfer The Outer and Inner Edges Before Installation

- Use 0141 for DN20-DN50 to chamfer the outer edges and also deburr the inner end.
- Use a file for DN63-DN200 to chamfer the outer edges; make use of a deburring tool to deburr the inside of the pipe end.

Installation Guide for DN63~DN200

01

Slide the seal over the edge of the pipe so that it sits flush with the lugged edge.

→

02

Insert the second pipe into the seal until the seal and the lugged edge are flush.

→

03

Position the clamp over the seal.

06

Fully tighten the clamp screws.
20 ft-lbs. Torque: 44.5Nm
Clamshell halves should be flush with each other.

←

05

Pull the pipe back towards the outside of the clamshell to complete alignment.

←

04

Tighten the pre-fitted screws.

07

For effective assembly, tighten the screws in an "X" pattern. To disassemble, perform the same operation in reverse order.

Hand-held hydraulic lugging machine operation requirements

Manually open the jaws of the clamp and insert the aluminum pipe into the clamp as far as possible.

Release the jaws. Press the trigger and crimp the pipe until a "snap" sound is heard.

Re-open the two jaws to remove the pipe and rotate the pipe slightly. Put the jaw side to the mark position.

Renew the operation until the required minimum number of lugs for each diameter is finished.

Hand-held hydraulic lugging machine operation requirements

AIRPIPE	DN63	DN80	DN100	DN150	DN200
Min. number of lugs	5	6	6	9	12

Note: Do not overlap the lugs!

Lugs size for DN63~DN200

Normal Diameter	h
63	3.0~3.3
80	3.0~3.3
100	3.0~3.3
150	3.0~3.3
200	3.0~3.3

Pipe Clip

AIRpipe's pipe clips are designed for versatility. They can be secured via all-thread rod through the clip's internal 3/8" 16 nut, or mounted directly with wall anchors.

The bolt size 3/8"-16 is suitable for all fixing clips. This clip allows expansion and contraction of the pipe to occur freely. The fixing clip should be fixed at the min distance of 6 inch (150mm) from the connector in order to allow for the expansion and contraction effect.

Spacers for pipe clips

0027
Ø20-25 mm/³/₄"-1"

0127
Ø40-63 mm/1¹/₂"-2¹/₂"

Spacer clip 0027 is used to create a level plane for 3/4" or 1" diameters transitioning to 1 1/2", 2", or 2 1/2".
Spacer clip 0127 is used to create a level plane for 1 1/2", 2", or 2 1/2" diameters transitioning to 3" or 4".

Installing Quick Drop Connectors

01

- Mark the pipe where the hole for the quick drop connector will be installed.

02

- Identify the drill arbor & hole saw bit required by locating the quick drop part number on the sizing chart.
Note: the quick drop part number is located on the connector.

05

- Apply steady pressure until the hole saw bit has completely entered the pipe.

06

- Remove debris and deburr cut edges.

03

- With the proper drill arbor & hole saw bit part numbers identified, thread the hole saw bit onto the drill arbor to create a single drill bit.

04

- Hold the drill perpendicular to the pipe with the drill bit in the center of the mark placed on the pipe.

07

- The quick drop connector easily aligns into the drilled hole.

08

- Tighten the bolt to complete assembly

Compensating for the effect of expansion and contraction due to temperature variations

Consequences of not properly accounting for thermal variations:

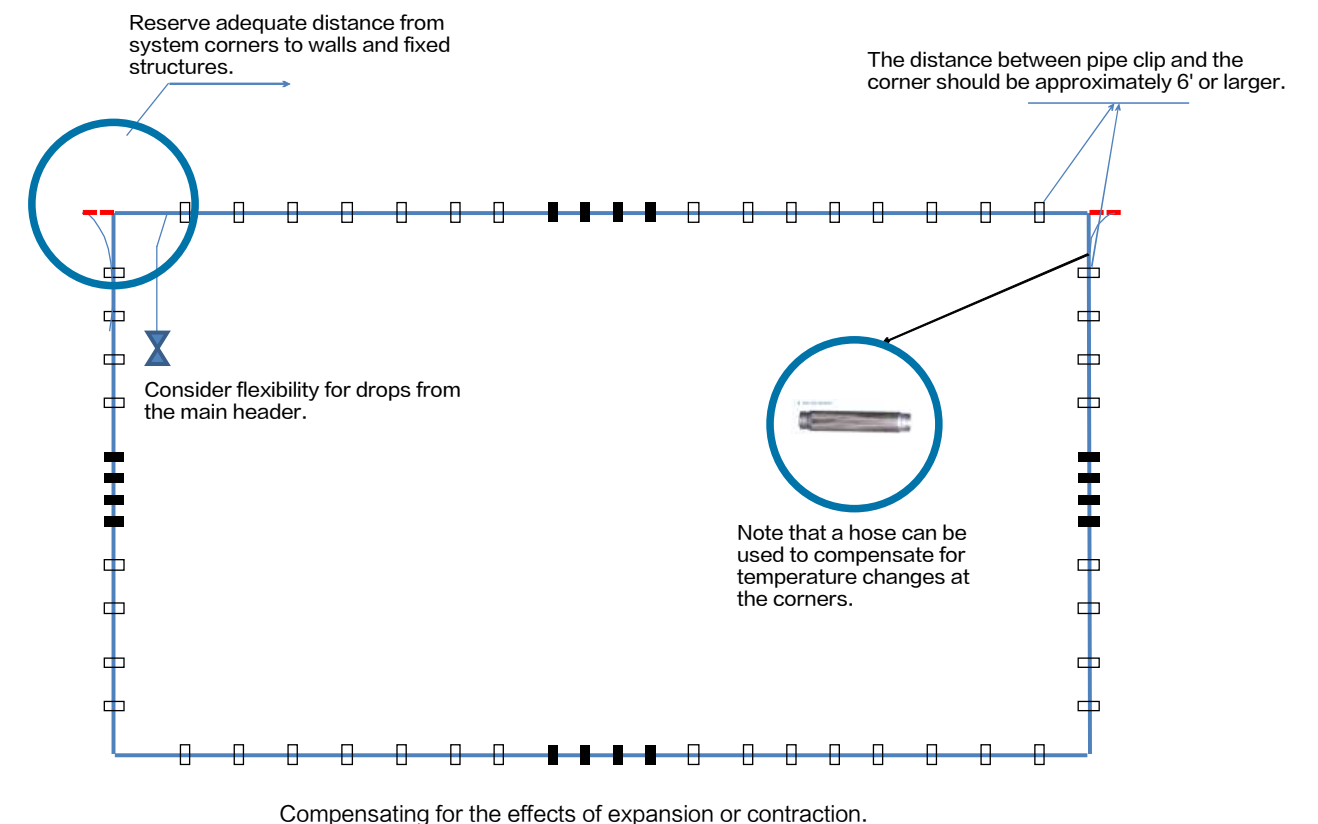

- Leakage and system deformation, that in extreme situations, could result in a connection separation.
 - Pipe system movement could create an obstruction.
 - Quick drop connections could become compromised.
1. In order to compensate for the effects of expansion and contraction due to temperature variations, system lengths should be appropriately evaluated and expansion joints installed where needed.
 - a. Anytime there is a change in temperature between areas.
 - b. If there is a temperature differential of 30° F or more possible in the system.
 - c. For significant lengths of piping.
 2. Recommended locations of flexible hoses or expansion loops include but are not limited to.
 - a. The discharge of the compressor.
 - b. The middle of a long run of pipe.
 - c. Corners of a piping network.
 - d. In a multiple pipeline loop at the beginning of a parallel line internal to the pipeline loop.
 3. Best practices include but are not limited to:
 - a. All aluminum piping to be installed in strict accordance with AIRpipe installation instructions and specifications.
 - b. Allowing the corners to expand and contract by placing pipe clips an appropriate distance from each corner. Avoid placing a pipe clip directly in the corner.
 - c. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls.
 - d. Install piping adjacent to equipment and machines to allow service and maintenance.
 - e. Install air and drain piping with 1 percent slope downward in direction of flow.
 - f. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating, unless otherwise indicated.
 - g. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.
 - h. Install piping to permit valve servicing.
 - i. Install piping free of sags and bends.
 - j. Install unions, adjacent to each valve and at final connection to each piece of equipment and machine.
 - k. Install sleeves and escutcheons for piping penetrations of walls, ceilings, and floors as necessary.
 - l. The fixing clips shall allow axial movement of the pipe to compensate for system expansion and contraction.
 - m. Horizontal and vertical AIRpipe piping shall be supported by AIRpipe pipe clips.
 - Hanger rods to be solid with only enough thread for the connection ends.
 - Hangers to be spaced at intervals as described herein, as required to avoid sag, prevent vibration, and allow accurate leveling or grading.

1. Single loop system

A) Installing flexible hose in the middle of a pipe run.

B) Installing flexible hose at the corner of a long pipe run

2) Multiloop pipeline
